

★ 納米噴鍍技術

NANOMETER SPRAY PLATING TECHNOLOGY

CTS納米噴鍍是替代傳統電鍍的一種高科技技術，通過噴塗達到電鍍效果，其不含重金屬，沒有三廢排放，此技術的誕生避免了傳統電鍍工藝引起的一系列環境污染問題。是繼真空電鍍、水電鍍之後的一項技術創新。

CTS Nanometer spray plating technology is a kind of high technology of spray plating substituting traditional electroplating technology, with the distinct characters of no heavy metal and no three discards pollution, which leads to a technology revolution completely taking place of electroplating. The invention of this technology effectively avoid a sequence of environment pollution problems caused by traditional electroplating technology, and it is whole newly technology innovation after electroplating and metallization.

★ 鐳射水轉印

LASER WATER TRANSFER PRINTING

鐳射水轉印膜，是我公司最新研發的新產品。可廣泛應用於：五金、塑膠、皮革、玻璃、陶瓷、木材等制品的表面轉印。其操作工藝和普通水轉印一樣，無需額外添加設備，降代您的投資成本。鐳射圖案可按要求開版定制。

Laser Water Transfer Printing Film is the brend new revolution of traditional water transfer printing (CUBIC) technology. The working process is same with traditional water transfer printing. There are no extra equipment required. The laser effect film could be designed by your customization. The special LWTP film can be printed with the materials: Metal, Plastic, Glass, Wooden, Ceramics.....
